

ANYELO PETIT

Senior Software Engineer · Ruby on Rails · AI-Augmented Development

anyelopetit@gmail.com · +58 412 662 5353 · [linkedin.com/in/anyelopetit](https://www.linkedin.com/in/anyelopetit) · github.com/anyelopetit · Remote (Venezuela)

PROFESSIONAL SUMMARY

Senior Software Engineer with 10+ years of experience designing and delivering scalable, customer-facing Ruby on Rails applications in production environments. Deep expertise in Rails 6/7/8 architecture — from monolith-to-modular migrations to advanced PostgreSQL optimization, Sidekiq/Redis async pipelines, and clean REST/GraphQL API design. Proven track record owning features end-to-end: from discovery and cross-functional collaboration through launch, post-launch metrics monitoring, and iterative improvement. Actively leverages AI-powered development tools (Claude Code, Cursor, GitHub Copilot) as a force multiplier across the full engineering lifecycle — from architecture exploration and implementation to automated test generation, performance analysis, and code review acceleration. Consistently delivers 90%+ test coverage through TDD/BDD with RSpec. Available for senior individual contributor and tech lead roles in remote-first teams.

CORE COMPETENCIES

Ruby on Rails (Advanced): Rails 6/7/8 · ActiveRecord · Metaprogramming · Engines & Mountable Gems	AI-Powered Development: Claude Code · Cursor (Rules/MCP) · GitHub Copilot · ChatGPT · Gemini · Prompt Engineering
API Design: REST (versioned) · GraphQL · ActionCable · WebSockets · OpenAPI/Swagger	Testing & Quality: RSpec · TDD/BDD · 90%+ Test Coverage · Cypress · React Testing Library · Factory Bot
Database Engineering: PostgreSQL · Composite Indexes · Table Partitioning · EXPLAIN/ANALYZE · SQLite · MySQL	Async & Background Jobs: Sidekiq · Redis · AWS SQS · AWS SNS · RabbitMQ · Solid Queue
Software Architecture: Hexagonal · DDD · Microservices · Modular Monolith · CI/CD · Feature Flags	Frontend: React · Next.js 15 · TypeScript · Hotwire · Tailwind CSS · AlpineJS · React Query
Cloud & DevOps: AWS (EC2, S3, Lambda, ECS) · Docker · Kubernetes · Google Cloud · GitHub Actions · Drone CI	Observability: Sentry · Datadog · Structured Logging · Performance Monitoring · Mixpanel

PROFESSIONAL EXPERIENCE

Senior Full Stack Engineer · Rankmi · Santiago, Chile (Remote) | Nov 2021 – Present

Stack: Ruby on Rails 6/7, RSpec, ReactJS, TypeScript, Cypress, AWS (SNS/SQS), Docker, Kubernetes, PostgreSQL

- Architected and developed customer-facing Ruby on Rails features across distributed microservices (ATS, LMS, Core, Workflows) serving 1,000+ enterprise clients across LATAM, owning outcomes from discovery through post-launch optimization.
- Designed and built versioned REST API endpoints consumed by React frontends, focusing on low-latency responses, clean domain separation, and measurable business impact.
- Led SQL performance investigations using EXPLAIN ANALYZE on PostgreSQL — resolved N+1 patterns and slow query bottlenecks in high-traffic endpoints, improving p95/p99 response times significantly.
- Implemented async processing pipelines with AWS SNS/SQS replacing synchronous flows, reducing p99 response times by decoupling critical paths and improving system scalability.
- Established RSpec testing standards across teams — unit, integration, and request specs for models, controllers, services, jobs, and background workers — achieving 90%+ test coverage on all new modules.
- Integrated Claude Code and Cursor (with custom MCP Rules) into the team's engineering workflow for architecture exploration, refactoring at scale, automated test generation, and performance analysis.
- Mentored junior engineers through code review, pair programming, and architectural decision documentation, strengthening team knowledge-sharing and technical growth.

- Collaborated cross-functionally with product, design, and customer success teams to translate customer needs into scalable technical solutions, iterating based on real user feedback and usage data.

Full Stack Engineer · Shipit CL · Santiago, Chile (Remote) | Jun 2021 – Nov 2021

Stack: *Ruby on Rails 6, RSpec, ReactJS, Cypress, Intercom, Mixpanel, ClickUp*

- Maintained and shipped new features across a 15+ repository microservices platform handling logistics for thousands of Chilean merchants, delivering customer-facing value iteratively.
- Built and documented REST API endpoints consumed by React frontends; improved Intercom integration for dynamic in-app banners to enhance user experience.
- Achieved 90%+ test coverage on all new modules through RSpec (unit + integration) and Cypress (end-to-end), following strict TDD practices and CI/CD pipelines.
- Instrumented new features with Mixpanel analytics events, enabling product decisions based on real usage data and measuring business impact of delivered features.

Senior Ruby on Rails Engineer · ViveTech / Mercatiendas · Bogotá, Colombia (Remote) | Sep 2020 – Jun 2021

Stack: *Ruby on Rails 6, Docker Compose, Google Cloud Platform, PostgreSQL, AlpineJS, Axlax, Roo*

- Sole backend owner of a multi-tenant e-commerce platform with per-store subdomain routing, independent theme management, and isolated inventory — designed and built customer-facing features end-to-end.
- Containerized the full application stack with Docker Compose and deployed to Google Cloud Platform, enabling reproducible environments, CI/CD automation, and zero-drift deploys.
- Built bulk product inventory import/export pipelines using Axlax and Roo, replacing manual CSV workflows and directly reducing operational overhead for store operators.
- Applied reactive UI patterns with AlpineJS for cart, filters, and category state — eliminating full-page reloads on key user flows and improving perceived performance.

Ruby on Rails Engineer · Elitgon / Weclin · Bogotá, Colombia (Remote) | Jul 2019 – Sep 2020

Stack: *Ruby on Rails, PostgreSQL, REST API, RSpec, JavaScript, Bootstrap 4*

- Designed and built a mobile-first REST API powering an iOS cleaning services marketplace — covering booking, scheduling, worker matching, and payment flows with a focus on user experience.
- Practiced strict TDD with RSpec across the full stack — models, controllers, services, and system tests — maintaining 90%+ test coverage throughout the project lifecycle.
- Led technical discussions and code reviews within the team, introducing consistent naming conventions, service object patterns, and automated testing standards.

Ruby on Rails Developer · Tecno Software / TecnoUniverse · Madrid, Spain (Remote) | Jan 2019 – Jun 2019

Stack: *Ruby on Rails, Sidekiq, Redis, ActionCable, WebSockets, PostgreSQL, Stripe, AWS*

- Implemented full-stack features on a professional social network: Devise auth, Rolify RBAC, CanCanCan permissions, Stripe payments, and geolocation via Geocoder + Google Maps API.
- Built a real-time private chat system using ActionCable WebSockets with live notifications for messages and bookmarks, demonstrating end-to-end feature ownership.

Backend Department Coordinator · Slice Group / Keppler Admin CMS · Punto Fijo, Venezuela | Jan 2016 – Jan 2018

Stack: *Ruby on Rails, PostgreSQL, JavaScript, VueJS, REST API*

- Led the backend team building Keppler Admin — an open-source, plugin-based Ruby on Rails CMS — architecting a dynamic plugin system for installation/uninstallation, form generation, SEO metadata, and image uploads.
- Drove cross-functional initiatives end-to-end alongside design and product, delivering a live Ruby console and Git branch context plugin exposing developer tooling directly within frontend views.

AI-AUGMENTED ENGINEERING (KEY DIFFERENTIATOR)

Actively integrates AI-powered development tools across the entire software lifecycle — not as a shortcut, but as a force multiplier to operate at a higher level while maintaining architectural judgment and full code ownership:

- Claude Code & GitHub Copilot: architecture exploration, large-scale refactoring, automated test generation, performance profiling workflows, and code review acceleration across production Rails codebases.

- Cursor (with custom Rules + MCP context): context-aware agentic pair programming on large codebases with tight integration into project conventions and domain requirements.
- Prompt engineering & AI workflow design: structuring multi-step agentic tasks, defining context boundaries, validating AI-generated code against domain requirements, and tracking emerging AI capabilities to drive productivity.
- Perplexity + Gemini (Warp terminal): real-time technical research and synthesis during problem-solving and architecture exploration sessions.

EDUCATION

B.Sc. Systems Engineering · Universidad Nacional Experimental de la Fuerza Armada (UNEFA), Venezuela
· 2014 – 2019

CERTIFICATIONS & CONTINUOUS LEARNING

- Frontend Architecture Career — Platzi (2018)
- Ruby Backend Development Career — Platzi (2017)
- Ruby on Rails, Ruby, CSS Fundamentals, jQuery — Platzi / Sololearn (2017)
- Ongoing: AI-augmented development practices (GitHub Copilot, Claude Code, Cursor), Next.js 15 App Router, PostgreSQL internals, AWS Solutions Architecture, Hotwire & Tailwind CSS

LANGUAGES & WORK PREFERENCES

Spanish: Native | **English:** Professional Working Proficiency (B2)

Work Mode: Remote-first · Full-time · Open to async-first teams globally

Target Roles: Senior Software Engineer · Senior Ruby on Rails Engineer · Backend Tech Lead · Staff Engineer
